Use Case	Recording of nutrient in	take				9
Context	As soon as a customer consumes a prepared dish, the system shall provide the nutritionist and the kitchen with the ability to make personalized corrections according to the diet.					
Domain	Food & Nutrition	Business Value	Personalization Communication Control	\boxtimes	Acquisition Optimization Analysis	

Description				
Stakeholders & Interests	Stakeholder	Interests		
	Kitchen staff	Minimization of workload or adjustment of production quantity		
	Manager of the kitchen	Adaptation of meal quantities to consumers; reduction of food waste		
	Customer	Satisfy appetite; adhere to nutritional guidelines		
	Nutritionist	Receive nutritional information from patient; support with compliance		
Required Data	Order information Image data of dish/plate served Image data of dish/plate after consumption by customer Unique identifier of customer			
Current Conditions	Especially in the hospital environment, a waste rate of 6% to 65% per meal served can be expected. An additional driver is the incorrect serving of meals due to the need to comply with nutritional information. There is no example of how this problem is currently being solved.			

Procedure				
Trigger	The preparation of a desired dish is complete and ready to serve.			
Use Case Procedure	Step	Activity		
	1. Capture ready-to-serve dish	An AI records the dish to be served.		
	2. Serving the dish	The dish is served to the customer.		
	3. Capture consumed dish	An Al records the meal consumed.		
	4. Analysis and extraction	Nutritional information and the amount consumed are extracted.		
	5. Transmission of information The recorded information is sent to the kitchen, the customer, and the nutrition			
	Gaining knowledge and optimization	The information is used to derive findings and optimize the dish if necessary.		
Use Case Anomalies	Step	Activity		
	No information provided.			
Final State	The quantity and nutritional components of future meals are recorded.
